

Simplicity Control Freedom

Follow a simple installation procedure to use StratusLab with your existing hardware to create a cloud.

Keep it private, or allow secure access with X.509 grid-compatible access control.

Control and monitor your infrastructure-as-a-service cloud designed to run grid services and other demanding applications.

Freely manage and customize virtual computing environments for your complex applications.

For a StratusLab test drive, email **support@stratuslab.eu** to request an account on our cloud infrastructure.

Grids support **sharing resources** and expertise through VOs, and offer a uniform **security** model. However, developing and running applications on a grid can be complex.

Clouds allow **dynamic allocation** of resources through **simple interfaces** and support **complete customization** of the application environment.

StratusLab draws on the strengths of both **grid** and **cloud** technologies to offer a cloud solution that meets the needs of computational researchers and systems administrators.

“French **bioinformatics** platforms are planning to use **StratusLab** to help the deployment of their site inside our national grid infrastructure. This will also allow them to use the **flexibility and elasticity** of the cloud to provide bioinformaticians and biologists with a **simple** way to access the services and applications needed to analyse the massive biological datasets normal in modern research.”

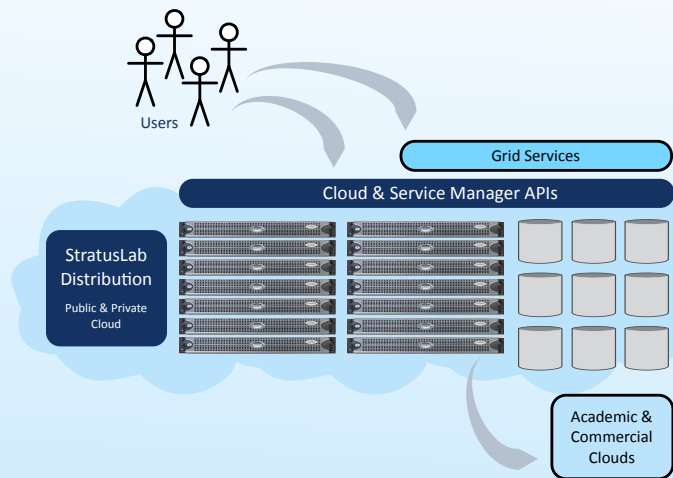

– Christophe Blanchet

Institut de Biologie et Chimie des Protéines, CNRS, France

Features

- Full **production-ready** cloud distribution
- **OpenNebula** virtual infrastructure manager
- Claudia platform service management for **dynamic service provisioning and scalability**
- **Marketplace** which allows user communities to create, find and share **customised virtual machine images**. Starter images with common OS's are available as well as grid and bioinformatics appliances
- **Persistent storage** allowing users to create and access disk-like storage areas on remote cloud storage resources
- Sophisticated **web-monitoring** tool
- Easy-to-use **command-line tools** for users and system administrators, tested on **Linux, Mac OS X and Windows**
- Supports **cloud authentication via X.509** grid certificates
- Manual and **Quattor** installation options
